

KeyWatcher - Blue Glue Contractor Validation & Visitor Management Systems For Your Peace Of Mind

Australian Security Technology

BLUEGLUE®

Keeping track of contractors and visitors onsite is a key management and OHS requirement that building owners and managers are charged with. Our KeyWatcher key control and management system combines with Blue Glue's Biometric Personal Identification protocols, using secure database and software systems to provide you with the optimum solution.

Benefits to You

- Control onsite security and contractor/visitor management easily and effectively
- Save time and money using our systems
- Your contractors and visitors also save time and money
- Single point of data entry for distribution to all sites
- Single Induction for all Contractors/Staff/Visitors
- National distribution of Induction data/Skills and Competency information
- Remote management of the system by authorised personnel
- Live validation of competencies in-field

Our touchscreen entry is easy to use

Our Contractor & Visitor Validation Systems allow contractors and visitors to perform a site login at a designated kiosk, using their previously recorded biometric scan. The CVVS system can optionally print a wristband to visually identify the wearer as being signed in.

The CVVS also integrates with the KeyWatcher key control cabinets to allow authorised distribution of keys. The system provides security and peace of mind.

Principal features

- Easy to use touch screen technology
- Secure key management system
- Automatic wristband allocation with printed name/date/time stamp
- Secure storage of up to 50,000 individual fingerprints
- Recorded unauthorised or unrecognised login attempts
- Group or individual messaging at the touchscreen
- Contractor/Visitor time onsite recorded
- Live tracking of current onsite headcount
- Live evacuation management in the event of an emergency

User focus: Westfield

Westfield Group is continuously looking at how it can improve the systems that ensure the protection and safety of centre staff and contractors in back-of-house and operational areas.

With thousands of staff and contractors working in its centres across Australia, the Group identified a clear need for an efficient and secure system that would allow all workers safe and streamlined access to and from authorised centre locations.

After working together over several years of trials and product evolution with safety innovator Blue Glue and technology partner AST Keywatcher, Westfield launched the biometric security system that functions through fingerprint recognition. Known as NoWAIT (National Work Authorisation and Induction Training), the system is used by contractors and consultants across the Australian portfolio.

The system allows for real time monitoring of the access of authorised contractors and consultants to the back-of-house and other operational areas. NoWAIT seamlessly integrates with the existing KeyWatcher cabinets for secure issuance of keys while touch screen video technology provides for safety messaging to staff. In the event of an evacuation or emergency, NoWAIT helps identify who is registered as being onsite, allowing Westfield to manage their safety.

NoWAIT delivers a number of other benefits, including:

- No time lost for contractors and consultants signing in and issuing keys
- Automated access process using fingerprint technology for sign-in & sign-out at centres, operating 24 x 7
- Synchronised issue of durable identification wrist band and high quality photo ID induction card
- Integrated electronic KeyWatcher cabinet to automate and streamline the authorised issuing and returning of keys
- Consistent delivery of safety inductions at shopping centres
- Secure storage of contractor information on a centralised system.
